Pocketful

Everyone is building AI agents that talk. We built one you can trust with your PayPal wallet.

AN AI WEEKEND COMPANION

It plans, splits and saves, and never spends a cent without your approval.

THE PROBLEM

Weekends cost us *guilt, time and money*

Budget guilt

Apps scold you after you overspend.

Friday fog

Too tired to choose, so you stay home.

Forgotten subscriptions

`$50–$150` a month, quietly gone.

Awkward splits

`$100 / 3 = $99.99`. Someone eats the cent.

TRADITIONAL APPS

Reactive. *They scold you after you overspend.*

POCKETFUL

Proactive. *It guards your budget before you spend.*

HOW IT WORKS

One loop, *Friday to Sunday*

ALWAYS ON

Know

Your exact fun budget, learned from your history.

FRIDAY AM

Recover

Cancel subscriptions you forgot.

FRIDAY 5 PM

Plan

Three real outings for your mood.

SATURDAY

Split

Friends pay their exact share.

SUNDAY

Sweep

Leftovers go into your vault.

ALWAYS ON

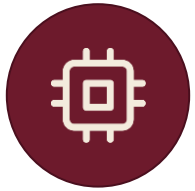

Silently ingests past PayPal and ledger transactions to deduce your fixed bills and calculate your exact guilt-free fun budget.

Every step that moves money asks for your approval.

THE TRUST IDEA

AI suggests. You approve. *Code pays.*

1 · SUGGESTS

The AI

Plans outings, spots waste, explains. It has no way to move money.

2 · APPROVES

You

Hold the seal and approve with your passkey. It is tied to that exact action.

3 · EXECUTES

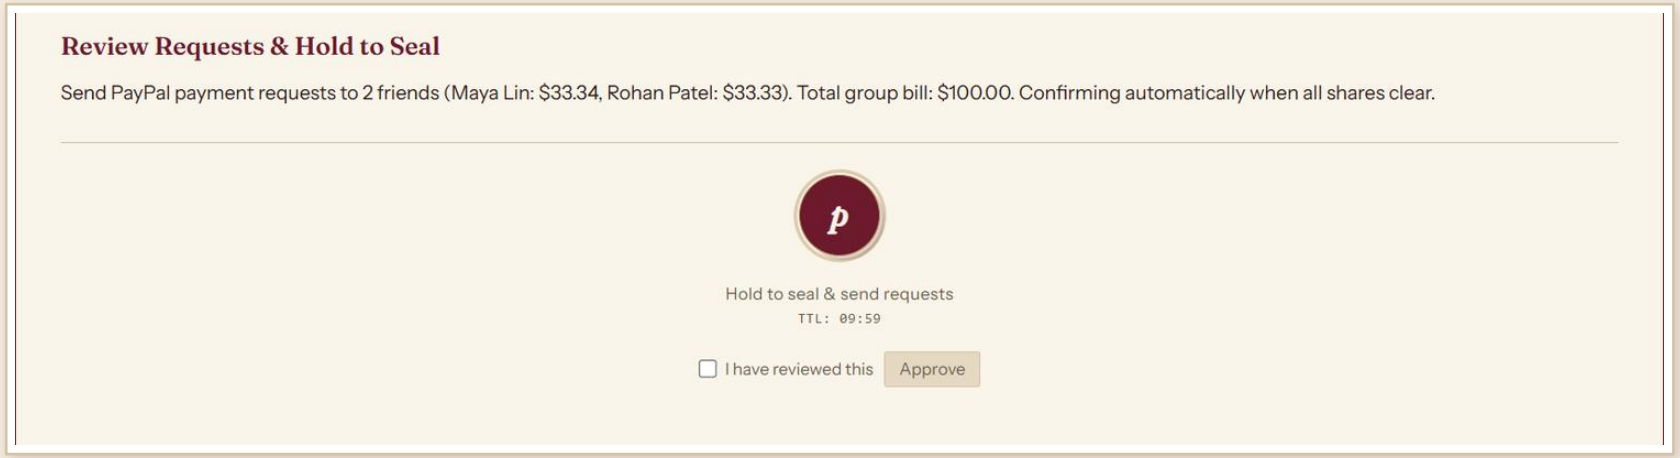

The Guardian

Deterministic code re-checks your limits, then pays once.

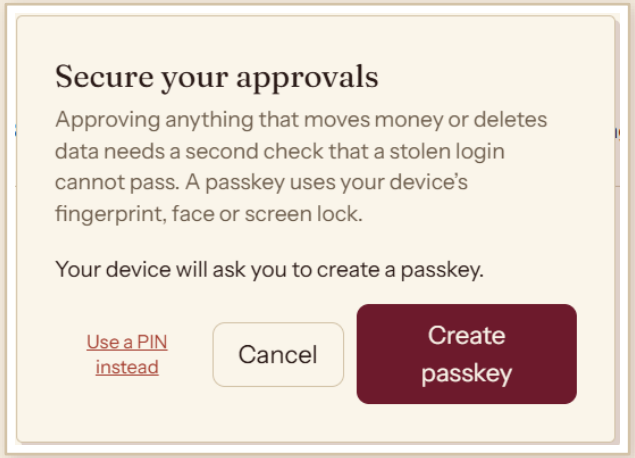

Gemini 2.5 Flash writes suggestions. It never touches a payment.

WHY IT IS SAFE

Safe even when *the AI is wrong*

1 · REVIEW, THEN HOLD THE SEAL
Every money action waits for you: a visible countdown, a review box, then the hold.

2 · PASSKEY APPROVAL
User-verified; PIN or app as fallback.

Time	Agent	Action Executed	Approval ID
1:52:09 AM	GUARDIAN	approval_staged_send_requests	af1cb1f5
1:52:07 AM	PLANNER	plan_generated	–
1:52:07 AM	PLANNER	plan_generated	–
1:51:56 AM	GUARDIAN	approval_staged_send_requests	8dc6c80a
1:51:54 AM	PLANNER	plan_generated	–
1:51:54 AM	PLANNER	plan_generated	–

WEBAUTHN · TOTP · PIN
24 H COOLING-OFF FOR NEW FACTORS
ATOMIC 5-STRIKE LOCKOUT
TOTP REPLAY-PROOF

3 · APPEND-ONLY ACTION LOG
Every agent action and approval is recorded. No edit or delete endpoints exist.

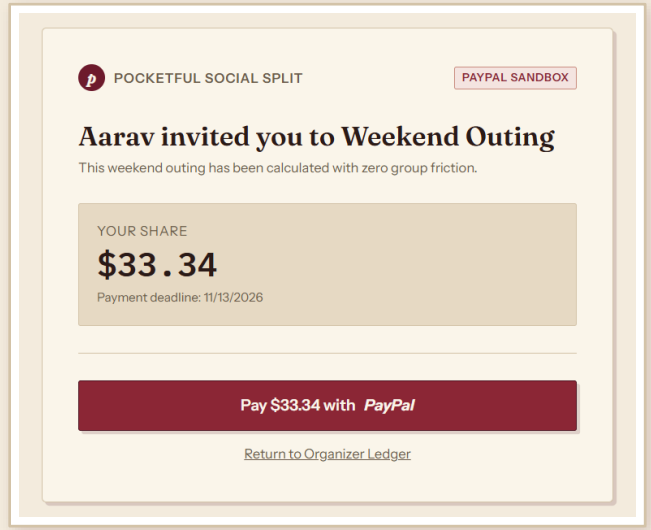

Limits re-checked at payment time, under a per-user lock. **A crash never double-charges:** outcomes are saved first.

GROUP SPLITS

Split any bill to *the exact cent*

ORGANIZER · GROUP SCREEN
Exact shares, computed on the server. Odd cents rotate between people.

FRIEND · /pay/:token
PayPal Sandbox checkout.

$33.34 + $33.33 + $33.33 = $100.00

No lost pennies

Whole-cent math, largest remainder, 9 currencies. Never a float.

No stranded friends

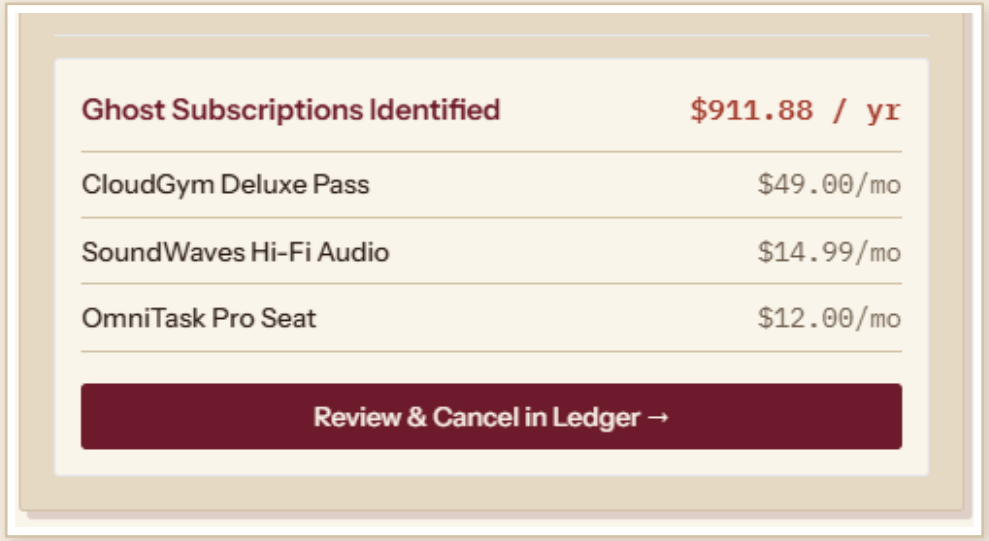

Cancel the outing and anyone who paid is refunded automatically.

3,000 property-tested split cases

TRANSPARENT LEARNING

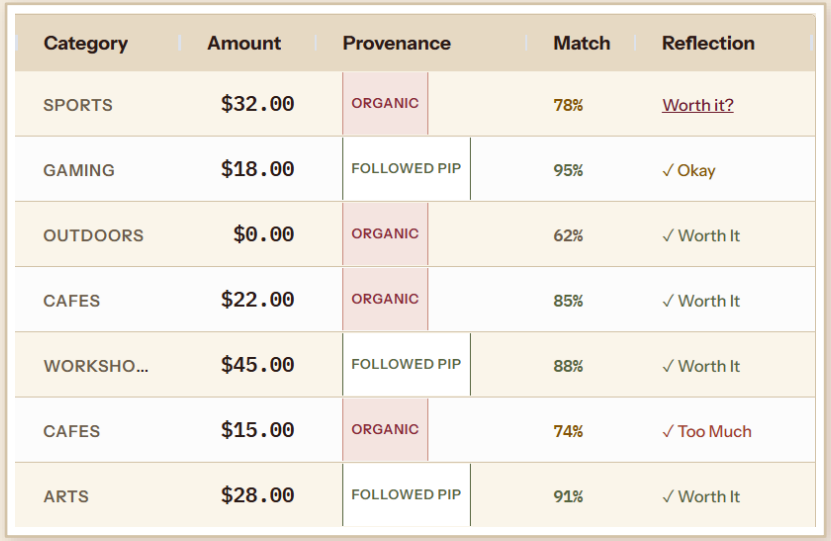

Learns from your *history*. You stay in control.

STEP 1
Ingest history

Reads past transactions to flag 90-day dormant ghost subscriptions. No surveys.

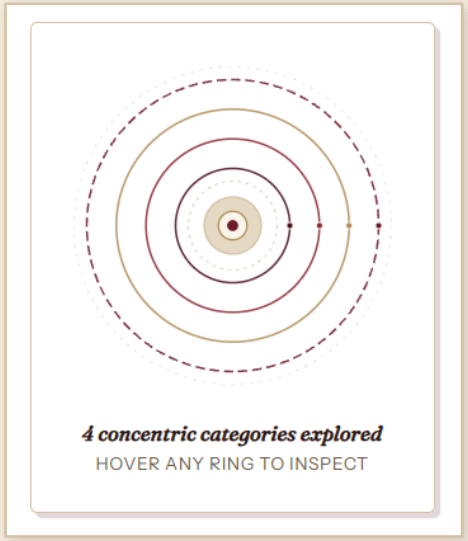

STEP 2
Adapt with feedback

Category	Amount	Provenance	Match	Reflection
SPORTS	$32.00	ORGANIC	78%	Worth it?
GAMING	$18.00	FOLLOWED PIP	95%	✓ Okay
OUTDOORS	$0.00	ORGANIC	62%	✓ Worth It
CAFES	$22.00	ORGANIC	85%	✓ Worth It
WORKSHO…	$45.00	FOLLOWED PIP	88%	✓ Worth It
CAFES	$15.00	ORGANIC	74%	✓ Too Much
ARTS	$28.00	FOLLOWED PIP	91%	✓ Worth It

1-tap Worth it, Okay or Too much refines picks, never stereotyping your taste.

STEP 3
Complete user agency

Inspect what it learned, export it, or erase it in one tap.

THE SCORECARD

Tested hard, *with receipts*

$ npm test

650

✓ unit & component tests passing

$ node verify-fixes.mjs

79 / 79

✓ live adversarial exploit probes

$ npm run test:db

73 / 73

✓ tests on real Postgres 16

$ npm audit

0

✓ vulnerabilities, dev + prod

```
 Test Files  47 passed (47)
      Tests  573 passed (573)
   Start at  02:21:50
   Duration  16.09s (import 55%, tests 43%, transform 2%)

> pocketful-web@1.0.0 test
> vitest run

 RUN  v5.1.0 C:/Users/Divyansh/Desktop/PocketFul/apps/web

 ✓ test/session-store.test.ts (11 tests) 9ms
 ✓ test/errors.test.ts (10 tests) 13ms
 ✓ test/step-up-client.test.ts (17 tests) 39ms
 ✓ test/a11y-components.test.ts (5 tests) 35ms
 ✓ test/group-split-client.test.ts (5 tests) 35ms
 ✓ test/tokens.test.ts (15 tests) 70ms
 ✓ test/seal-approval.test.ts (11 tests) 59ms
 ✓ test/csp-build.test.ts (1 test) 4006ms
   ✓ E4: production build is compatible with the SPA CSP (1)
     ✓ emits only same-origin external scripts, no inline scripts or inline event handlers
 ✓ test/demo-build.test.ts (2 tests) 7292ms
   ✓ D5: the demo identity cannot ship in a production bundle (2)
     ✓ a default production build contains none of the demo credentials, names or the demo
     ✓ positive control: a build that opts in with VITE_ENABLE_DEMO=true does contain them

 Test Files  9 passed (9)
      Tests  77 passed (77)
   Start at  02:22:07
```

NPM TEST · 573 API + 77 WEB

```
  PASS  payment still unpaid
  PASS  CHECKOUT.ORDER.COMPLETED shape credits the payment

[D4] receipt weeks
  PASS  ISO week resolves to its Monday
  PASS  garbage week -> 400
  PASS  invalid ISO week -> 400

[B5] currency change
  PASS  currency change is staged, not applied
  PASS  unsupported currency -> 400
  PASS  after approval caps keep the same major-unit number

[M3] region fallback
  PASS  a derivable region still works

[H10] request hardening
  PASS  malformed JSON -> 400
  PASS  oversized body -> 413
  PASS  disallowed CORS origin -> 403
  PASS  teardown: nothing is left listening on ephemeral port 53641
  PASS  teardown: no server process is still tracked

✓ 79 passed, 0 failed (100% adversarial exploit suite)
```

VERIFY-FIXES · 79 PASSED, 0 FAILED

PARTNER STACK

Built with *the best*

PayPal

Payments, subscriptions, refunds and webhooks.

AG Grid

The live spending ledger.

Gemini 2.5 Flash

Suggestions and explanations. Never payments.

Supabase

Postgres database, sign-in and row-level security.

APIMatic

A complete OpenAPI spec, ready for SDKs.

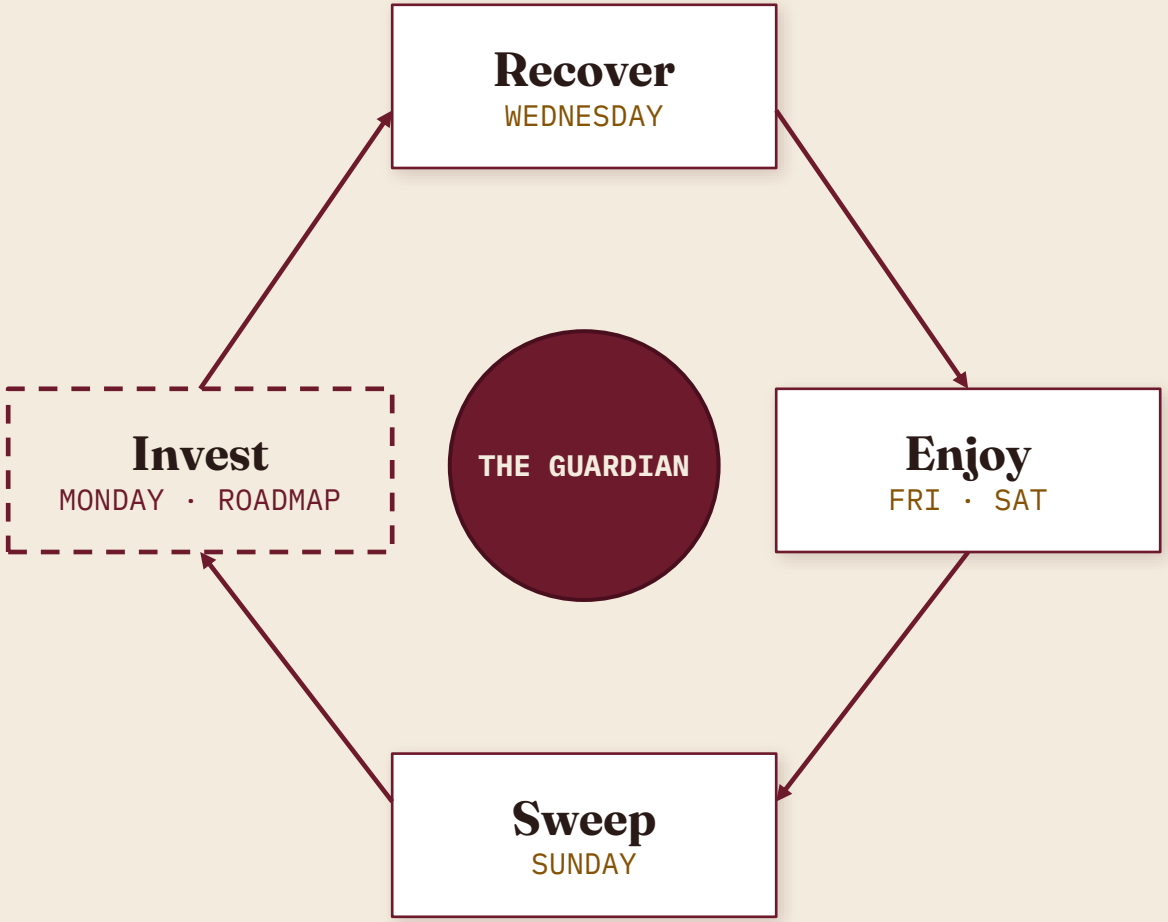

Render

Hosting from a single render.yaml.

FUTURE WORK · ROADMAP, NOT IN THE DEMO BUILD

Today, your weekend. *Tomorrow, your wealth*

Guarded micro-investing (flagship)
The Sunday Vault invests behind the same approval.

Passkey-only mode
Retire the PIN fallback: device-bound approvals only.

More ways to pay
UPI, FedNow, SEPA and wallets.

Group escrows
Book trips once every friend has paid.

BUSINESS MODEL · HYPOTHESIS, NOT BUILT
Sweep yield: margin on automated Sunday Vault allocations
Sponsored tickets: local venues pay for Friday 5 PM placement
PayPal volume: group splits grow peer-to-peer velocity

SUMMARY

Four promises, *one weekend*

Guilt-free weekends

Know your fun number. Plan it in seconds.

Money that behaves

Cancel waste, split exactly, refund automatically.

Learning you control

See it, correct it, erase it.

Trust by design

AI suggests, you approve, code pays.

We did not build an AI wrapper that talks about money. We built a deterministic companion that recovers wasted cash, curates real weekends and settles with friends to the exact cent.

650
tests passing

79 / 79
live probes

THANK YOU

Thank you

AI that expands your life, never your financial risk.

SCAN FOR THE REPO

GUARDED BY DESIGN

Questions welcome. Built with PayPal, Gemini, Supabase, AG Grid and Render.

APPENDIX · ARCHITECTURE

Probabilistic AI and deterministic money, kept apart

The AI side can read and suggest. Only the deterministic engine can mutate, and only after approval.

APPENDIX · DATABASE ARCHITECTURE · 9 SQL MIGRATIONS

Nine migrations. *Postgres enforces the rules.*

Append-only ledgers, Row-Level Security and sealed step-up secrets

001	**001_core_schema.sql**	Profiles, transactions, subscriptions, groups, approvals, audit log.
002	**002_occasions_schema.sql**	Pockets, holidays, getaway destinations, leave days, nudges.
003	**003_indexes_triggers_rls.sql**	Row-Level Security on tenant tables; append-only audit log.
004	**004_security_hardening.sql**	Approval transition guard, no TRUNCATE, cap-escalation block.
005	**005_audit_fixes.sql**	Erasure tombstones, atomic job leases, timezone-aware weekly cap.
006	**006_execution_integrity_stepup.sql**	Cap re-check under advisory lock, atomic vault and pocket moves.
007	**007_webauthn_totp_stepup.sql**	Passkey credentials, AES-256-GCM-sealed TOTP secrets, shared lockout.
008	**008_settlements_ledger.sql**	Append-only ledger of every PayPal capture and refund.
009	**009_stepup_hardening.sql**	24-hour wait for new factors, notifications, atomic attempt counter.

SUPABASE/MIGRATIONS · 9 FILES

```

```

Money is whole-cent bigint, never a float. Tenant isolation, append-only history, atomic locks and approval state changes are enforced by PostgreSQL itself.

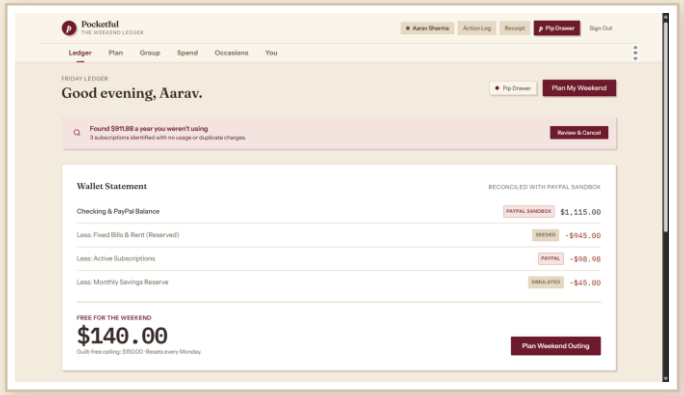

APPENDIX · HARDENING MATRIX

Production-hardened, *designed like a magazine*

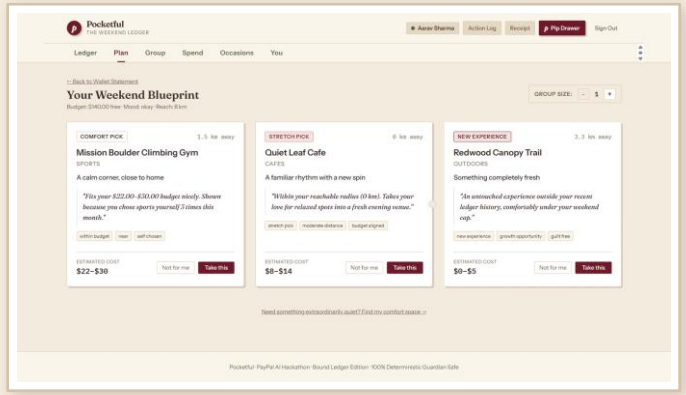

PILLAR	BUILT & WIRED	PROOF
Work-life & curation	`computeFunMoney` · Friday 5 PM Brief (OpenStreetMap Overpass) · Calm Space · Holiday & Getaway Planner · ISO-week mood check-ins	`130 planner & feature tests`
PayPal & social money	Ghost-subscription hunter (90-day, 1-tap cancel) · largest-remainder splitter · `/pay/:token` · auto-refund reconciler · guarded `change_currency` · atomic vault & pocket moves	`131 money & webhook tests`
Database & privacy	RLS on every tenant and internal table · immutable `audit_log` and `approval_events` · two-phase erasure with `ACCOUNT_ERASED` tombstones	`test:db`: 73 on Postgres 16
Accessible by design	≥ 4.5:1 contrast on every token pair · focus-trapped dialogs · keyboard approval path · `prefers-reduced-motion`	`tokens.test.ts · 31 a11y tests`
Step-up & sessions	User-verified passkeys, TOTP, PIN · 24 h cooling-off for new factors · atomic 5-strike lockout · TOTP replay blocked by compare-and-set · AES-256-GCM-sealed TOTP secrets · strict CSP	68 step-up tests

APPENDIX · THE APP, SCREEN BY SCREEN

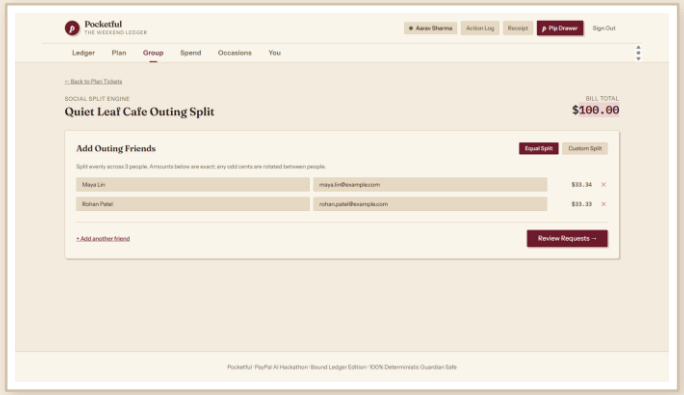

Six screens, *one weekend*

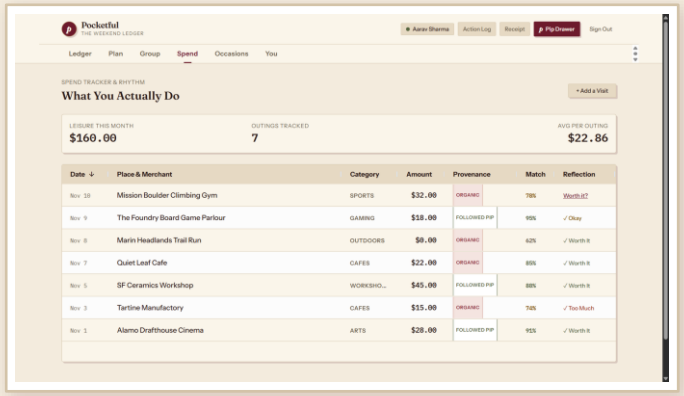

LEDGER
$140.00 free for the weekend

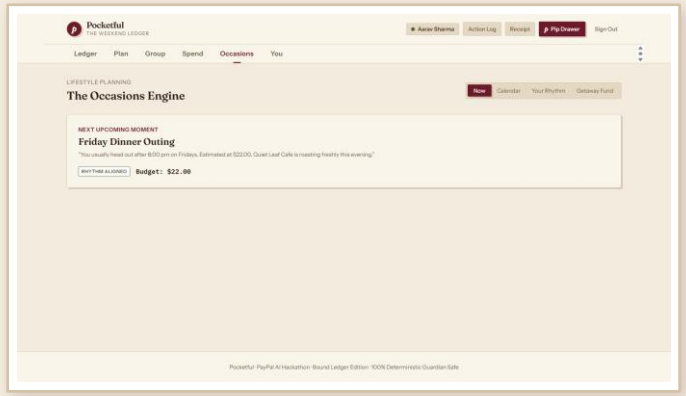

PLAN
Comfort, Stretch and New tickets

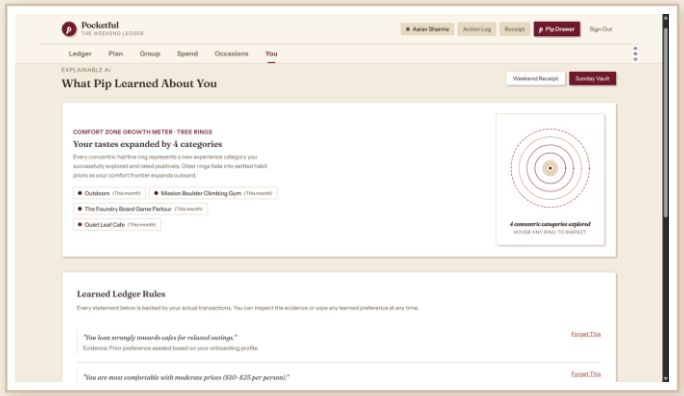

GROUP
Exact-cent split of $100.00

SPEND
Provenance, match, reflection

OCCASIONS
Next moment and trip budget

YOU
Tree rings and Forget controls
